

THE UNIVERSITY OF  
**NEWCASTLE**  
AUSTRALIA

# MASTER OF SCIENCE MANAGEMENT

- **Enjoy flexible learning options**
- **A unique mix of Science and Business Management subjects**
- **Contribute to national and international science policy**

## **Aim Higher**

That's what we're about at the University of Newcastle. From our students to our staff, we encourage growth, development and achievement in everything we do. To ensure we continue to set high standards we've created an online Science Management Masters program. This one year program is a unique combination of contemporary science and business management related topics to give you a mix of exciting issues, including:

- Science Policy and Commercialisation
- Climate Change
- Emerging Technologies in Energy Production
- Managing Intellectual Property
- Biodiversity
- Genetic Engineering
- Management and Organisational Behaviour
- Project Management

The aim? To provide you with advanced management skills in science and technology-based projects. You'll get to pursue research in areas that interest you the most and select electives from a wide range of topics, such as environmental science, energy, climate change, biodiversity, marine environment / ecology, water management, food science and genetic engineering. Combining relevant and current science topics with the development of advanced business management skills, you'll gain an in-depth understanding of science policy and commercialisation, managing intellectual property, project management and organisational behaviour. And because science is a global language, your understanding of key issues will enable you to flourish, both nationally and internationally. Now that really is aiming higher.

## **Go Further**

If you're interested in, participate in or manage science and technology projects you've come to the right place. Our unique Master of Science Management will develop and upgrade your management skills, helping you to achieve the career progression you strive for.

We've made it as easy as possible for you to get ahead. Due to the flexibility of the program you can study at your own pace. Staff, teachers, advisors and fellow students are only a click away, allowing you to thrive. Whether it's networking with others with similar interests or employment areas, the opportunities are all there. You can access our online library, liaise with discussion groups or chat to course coordinators and other members of staff.

## **Rocket Science? We don't think so**

We believe we've created a Masters program that is truly unique. Designed around the contemporary needs of science, it will give you a real understanding of the key issues affecting government, society and the broader economy today. Taught by scientists with international research reputations, you'll acquire critical thinking and analysis skills. By combining these transferable skills with an international perspective, you'll be in high demand across a wide range of industries and organisations.

## **Reach the Heights**

So what do you say? If you want to develop advanced knowledge, gain exciting insights, positively influence the science agenda and all with the flexibility to control your learning – then look no further. We've got everything in place for you to succeed.
